PROJECTS

Restaurant Management System ⬈
- This is a web application made for a restaurant to manage their stock, order, and accounts. The application can use in local computer and can sync local database with live database.
- Frontend: HTML, CSS, JS, jQuery, Backend: PHP, Database: MySQL

Asset Management ⬈
- This is a web application made for Bangladesh Police to manage and distribute their assets (i.e. walky talky) from main unit to sub units.
- Frontend: HTML, CSS, JS, jQuery, Backend: PHP, Database: MySQL

E-TICKET
- This is a vehicle seat booking management application. The application has two interfaces. one is website and other is admin side control panel. Admin can manage car, route, couch, employee accounts, etc. in control panel. User can search coach and reserve seat(s) on the website. There has some payment method integrated into this application. User can pay their fare by using those payment methods.
- Frontend: HTML, CSS, JS, jQuery, Backend: PHP, Database: MySQL
- See more projects to visit my website (arif.protiva.org)
